EDUCATION

Texas A&M University

College Station, TX

Bachelor of Science in Computer Science

Aug. 2024 – Present

Relevant Coursework: Intro to CS and Algorithms, Program Design and Concepts(C++), Engineering Lab Computation (Python), Introduction to Computing, Discrete Mathematics, Linear Algebra

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, Typescript, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Express, Django, Tailwind CSS, FastAPI, PyTorch

Databases & Cloud Services: MongoDB, Firebase Firestore, PostgreSQL(Neon), Supabase, Railway

Developer Tools: Git, Github, VS Code

API's & Platforms: REST APIs, Google Gemini API, Auth0

PROJECTS

ViZZion | *Python, PyTorch, OpenCV, Raspberry Pi* | *HackAI – Texas Instruments Winner*

Feb 2026 – Present

- Engineered an AI-powered assistive navigation system delivering real-time spatial awareness for visually impaired users
- Designed a prioritized haptic feedback system that encodes proximity into vibration intensity for intuitive user alerts.
- Trained a SegFormer (B0) semantic segmentation model on a custom dataset to detect sidewalks, curbs, and stairs
- Optimized the inference pipeline for low-latency performance, enabling real-time execution on resource-constrained hardware (Raspberry Pi)

Aggie Agenda | *Django, Neon, Supabase, React, JavaScript, Python*

Aug 2025 – Present

- Architecting a full-stack student workflow app using Django REST Framework and React, with data persistence on Neon's cloud-hosted PostgreSQL.
- Leveraging Supabase's real-time engine to support live updates and dynamic user interactions throughout the platform.
- Coordinating environment configuration, database migrations, and API integration between Django, Supabase, and Neon to support cloud-based development.
- Implementing GitHub OAuth and Supabase Auth to deliver personalized student profiles and persistent user data.

Nudge | *JavaScript, React.js, Node.js, MongoDB, Google Gemini API, Auth0*

January 2026

- Engineered a full-stack financial literacy platform using React, Node.js, and Express, integrating Google Gemini's Generative AI to process transaction data and deliver real-time, context-aware budgeting advice.
- Developed a secure RESTful API protected by Auth0, implementing server-side JWT validation to strictly control access to private user financial data and manage secure sessions.
- Architected a scalable MongoDB Atlas database, utilizing Mongoose schemas to efficiently structure user profiles and transaction history while minimizing latency for the frontend dashboard.

EXPERIENCE

Freelance Software Developer

Houston, TX

Chychos Mexican Restaurant

2026 – Present

- Built and deployed a full-stack inventory management system in Next.js, TypeScript, MongoDB Atlas, and Railway used by 20+ staff to track 500–1,000 SKUs across 3 storage areas.
- Engineered a CSV bulk-import pipeline with auto-classification and bilingual (English/Spanish) item parsing, cutting item onboarding from hours to minutes.
- Developed a real-time dashboard displaying live inventory valuation and low-stock alerts, replacing manual spreadsheet tracking for management.
- Secured the platform with NextAuth, bcrypt password hashing, and JWT sessions with hard expiry and idle-timeout auto-logout for 20+ users.
- Architected a service layer (itemService, historyService, priceLogService) with immutable audit logging and wrote unit tests with Jest and React Testing Library to validate core business logic.
