EDUCATION

Texas A&M University

College Station, TX

Bachelor of Science in Computer Science

Aug. 2024 – Present

Relevant Coursework: Intro to CS and Algorithms, Program Design and Concepts(C++), Engineering Lab Computation (Python), Introduction to Computing, Discrete Mathematics, Linear Algebra

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, Typescript, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Express, Django, Tailwind CSS, SwiftUI

Databases & Cloud Services: MongoDB, Firebase Firestore, PostgreSQL(Neon), Supabase

Developer Tools: Git, Github, VS Code

API's & Platforms: REST APIs, Google Gemini API, Auth0

PROJECTS

Aggie Agenda | *Django, Neon, Supabase, React, JavaScript, Python*

Aug 2025 – Present

- Architecting a full-stack student workflow app using Django REST Framework and React, with data persistence on Neon's cloud-hosted PostgreSQL.
- Leveraging Supabase's real-time engine to support live updates and dynamic user interactions throughout the platform.
- Coordinating environment configuration, database migrations, and API integration between Django, Supabase, and Neon to support cloud-based development.
- Implementing GitHub OAuth and Supabase Auth to deliver personalized student profiles and persistent user data.

TAMU SHPE Website | *Next.js, Typescript, Tailwind CSS, Node.js, React*

Aug 2025 – Present

- Developing and maintaining the official website for the Society of Hispanic Professional Engineers at Texas A&M
- Used Tailwind CSS for a responsive and accessible user interface across desktop and mobile devices.
- Redesigned and optimized the website, resulting in a 26% increase in traffic and improved user feedback on accessibility and clarity.
- Collaborating on development projects with 7-person team using Git for version control and agile workflows.

Tech Assist | *Swift, SwiftUI, Auth0, Firebase*

October 2025

- Developed a native iOS application that digitizes data center workflows, enabling technicians to resolve server issues through QR-driven, guided repair playbooks.
- Designed a modular data layer (Database.swift) to simulate backend persistence, supporting dynamic retrieval of WorkOrder and ServerIssueDocument objects.
- Integrated Auth0-based authentication and SwiftUI navigation logic for secure, seamless user sessions and instant "scan-to-solution" transitions.
- Utilized Git for version control and collaborative development, managing feature branches, merges, and commits across a 3-person team to deliver a production-quality prototype within 24 hours.

EXPERIENCE

Nudge | *JavaScript, React.js, Node.js, MongoDB, Google Gemini API, Auth0*

January 2026

Texas A&M University

College Station, TX

- Engineered a full-stack financial literacy platform using React, Node.js, and Express, integrating Google Gemini's Generative AI to process transaction data and deliver real-time, context-aware budgeting advice.
- Developed a secure RESTful API protected by Auth0, implementing server-side JWT validation to strictly control access to private user financial data and manage secure sessions.
- Architected a scalable MongoDB Atlas database, utilizing Mongoose schemas to efficiently structure user profiles and transaction history while minimizing latency for the frontend dashboard.
